			Total	$36.90

REQUIRED Business Purpose: Provide justification that clearly identifies how this purchase supports ASU and MSN and/or how the transaction directly

One 0805-size surface-mount device (SMD) component book (5,600 resistors, capacitors, light-emitting diodes (LEDs), and diodes). Student Landon Kuhman, under Professor Vivek Thangavelu, will use these parts to build the Light Detection and Ranging (LiDAR) printed circuit board (PCB) for OpenField (Team 101), a student-built robot that paints field lines, in Robotics and Autonomous Systems (RAS) 304. This supports ASU's mission of hands-on engineering education. One-time purchase; the quantity covers a breadboard prototype, the PCB, and repair spares.
